

**SUBJECT: Code update for TS Wheel Width Measurement Kit accessory**

Dear Customers,

We are pleased to announce a significant update to our non-contact **TS** wheel width measurement kits.

We have replaced the previous kit, code 8-21100232, with a new, more advanced model: the accessory kit code **8-21100293/90**.

Thanks to this new kit, width reading times will be significantly reduced. The new kit 8-21100293/90 will only be compatible with wheel balancers manufactured as of April 2024. The previous kit, code 8-21100232, which remains available while stocks last, will continue to be compatible with all wheel balancer models, with no production date limitations. Therefore, we encourage you to start purchasing the new kits to ensure that stocks of the previous kit remain available for the older models.

### **Important notice in case spare parts are needed**

Please note that, similarly to the new accessory kit, the spare sonar sensor, model **UF200**, code **5-128386**, included in the kit will **NOT** be compatible with wheel balancers manufactured until March 2024. For these models, the previous sensor model, UNDK20, spare part code 5-107696, compatible with all wheel balancer models - regardless of their date of manufacture - will continue to be available.

For additional details or assistance in integrating the new sensor into your equipment, please feel free to contact us.
